

## Notice of Construction Work for Rebuilding the Shelter Hut

**Construction period: Early June to end of October 2022**

**In 2022, the aging Mt. Kamihorokamettoku Shelter will be reconstructed.**

During the construction work, the designated encampment site will be used as a storage area for removal and construction materials.

So, during the construction period,

**① The shelter is not available for use.**

**② No camping is allowed.**

※Toilets attached to the shelter are available for use.

**Detailed information on the construction period will be announced in the second announcement to be issued in June or later.**

The hut's location means there is a very short window for construction-snow falls by October

We plan to finish the construction of a new hut in one season after the removal of the existing hut. We apologize for any inconvenience caused, and ask for your cooperation in carrying out the construction smoothly.
